Phase 1 - Account Management

Recall + Wazuh Mapping Sheet • 27 events

PART A - RECALL QUIZ (from memory, then verify)

All 27 - say the meaning AND why a SOC analyst cares

4720 user account created / SOC cares: it can be legit or an attacker is creating new account to create a backdoor

4722 user account enabled / SOC cares: this is the moment a dormant account becomes usable again - legit for return-from-leave, but an attacker enabling a stale account gets a login nobody watches

4723 password change attempted / SOC cares: user changing their own password is routine - but watch privileged accounts and odd hours, an attacker rotates passwords to lock the real owner out

4724 password reset by admin / SOC cares: helpdesk routine, but an admin reset takes over any account without knowing the old password - always verify there was a ticket

4725 user account disabled / SOC cares: the offboarding moment - when someone leaves the account dies the same day, a disabled account waking up later is a red flag

4726 user account deleted / SOC cares: if done by admin is good but if in odd hours attacker can delete the account after putting his work to remove evidences

4727 security-enabled global group created / SOC cares: a new role badge was minted - who created it and why, attackers create groups to organize the access they steal

4728 member added to the security group / SOC cares: an attacker can add low privilege memeber in a sercurity group to bypass pivileges and do escalation

4729 member removed from security-enabled global group / SOC cares: someone lost a role - normal in job changes, but check it is not someone erasing the evidence of who had access

4730 security-enabled global group deleted / SOC cares: a role badge destroyed - fine when a team is dissolved, suspicious when it erases who held privilege

4731 security-enabled local group created / SOC cares: a new lock on a new door - what resource does it guard and who asked for it

4732 member added to security-enabled local group / SOC cares: the moment access is granted to a resource - who got the key, who approved it, is there a business need

4733 member removed from security-enabled local group / SOC cares: a key taken back - normal offboarding, but verify it is not cleanup after data theft

4734 security-enabled local group deleted / SOC cares: the lock itself removed - check what it guarded before it vanished, can be cleanup after data theft

4737 security-enabled global group changed / SOC cares: the role's definition changed - what attribute changed and does it quietly widen who gets in

4738 user account changed / SOC cares: now here an account details can be changeed by the admin acc to his current employment status or an attacker is abusing the details of trick admin

4740 user account locked / SOC cares: high, because it cannot be intentionally that a user is doing this its a strong indication of brute force

4741 computer account created / SOC cares: a new machine got a domain identity - real IT deployment or an attacker's box joining the domain

4742 computer account changed / SOC cares: a machine identity was modified - usually routine rotation, but an attacker can alter machine accounts to persist

4743 computer account deleted / SOC cares: a machine identity removed - normal decommissioning, or an attacker deleting the traces of a compromised box

4754 security-enabled universal group created / SOC cares: a forest-wide badge minted - in a multi-domain forest this reaches everywhere, verify the business need

4755 security-enabled universal group changed / SOC cares: a forest-wide role modified - changes here ripple across every domain

4756 member added universal group / SOC cares: now its also a high security group if its done by attacker then the goal is persistence or lateral movement in other cross domains

4757 member removed from security-enabled universal group / SOC cares: forest-wide access revoked - verify it is real offboarding and not track-covering

4758 security-enabled universal group deleted / SOC cares: a forest-wide badge destroyed - check what it guarded across domains before it vanished

4767 account unlocked / SOC cares: who unlocked it and why - admin helping a locked-out user is routine, unlocking a privileged account at 3am is not

4781 Account name (SAM) changed / SOC cares: it can be legit done by admin or changed a new user name to same like the one that admin knows to create social engineering

All 27 events in order - one-line meaning each

- [ ] 4720 - User account created
- [ ] 4722 - User account enabled
- [ ] 4723 - User attempted to change their own password
- [ ] 4724 - Admin reset a user's password
- [ ] 4725 - User account disabled
- [ ] 4726 - User account deleted
- [ ] 4727 - Security-enabled global group created
- [ ] 4728 - Member added to security-enabled global group
- [ ] 4729 - Member removed from security-enabled global group
- [ ] 4730 - Security-enabled global group deleted
- [ ] 4731 - Security-enabled local group created
- [ ] 4732 - Member added to security-enabled local group
- [ ] 4733 - Member removed from security-enabled local group
- [ ] 4734 - Security-enabled local group deleted
- [ ] 4737 - Security-enabled global group changed
- [ ] 4738 - User account changed
- [ ] 4740 - Account locked out
- [ ] 4741 - Computer account created
- [ ] 4742 - Computer account changed
- [ ] 4743 - Computer account deleted
- [ ] 4754 - Security-enabled universal group created
- [ ] 4755 - Security-enabled universal group changed
- [ ] 4756 - Member added to security-enabled universal group
- [ ] 4757 - Member removed from security-enabled universal group
- [ ] 4758 - Security-enabled universal group deleted
- [ ] 4767 - Account unlocked
- [ ] 4781 - Account name (SAM) changed

PART B - WAZUH MAPPING TABLE

Generate each event -> find the alert in Threat Hunting -> read the rule ID off the fired alert.

Event	Meaning	Wazuh rule	Level	Verdict
4720	User account created	60109	8	needs tuning
4722	User account enabled	60109	8	covered
4723	Password change attempted	60110	8	covered
4724	Password reset by admin	60110	8	covered
4725	User account disabled	60111	8	covered
4726	User account deleted	60111	8	covered
4727	Security-enabled global group created	60140	5	covered
4728	Member added to security-enabled global group	60141	5	covered
4729	Member removed from security-enabled global group	60142	5	covered
4730	Security-enabled global group deleted	60202	5	covered

Event	Meaning	Wazuh rule	Level	Verdict
4731	Security-enabled local group created	60143	5	covered
4732	Member added to security-enabled local group	60144	5	covered
4733	Member removed from security-enabled local group	60145	5	covered
4734	Security-enabled local group deleted	60146	5	covered
4737	Security-enabled global group changed	60148	5	covered
4738	User account changed	60110	8	needs tuning
4740	Account locked out	60115	9	covered
4741	Computer account created	60121	5	covered
4742	Computer account changed	60121	5	covered
4743	Computer account deleted	60121	5	covered
4754	Security-enabled universal group created	60149	5	covered
4755	Security-enabled universal group changed	60150	5	covered
4756	Member added to security-enabled universal group	60151	5	covered
4757	Member removed from security-enabled universal group	60152	5	covered
4758	Security-enabled universal group deleted	60153	5	covered
4767	Account unlocked	60133	5	covered
4781	Account name (SAM) changed	60110	8	covered

PHASE 1 DONE = all of this

- [ ] Part A: all 27 events recalled cold (meaning + why a SOC analyst cares), all 27 meanings memorized in order
- [ ] Part B: all 27 rows filled - every event has a rule ID + level, or is marked GAP
- [ ] One-line verdict per event: covered / needs tuning / gap
