Phase 1 - Account Management:
Recall + Wazuh Mapping Sheet

Category: Account Management Events (27 events)
Goal of this phase: prove you know them cold, then map every one to Wazuh (built-in rule or gap).
How to use: read your READMEs first. Then do Part A from memory - no peeking. Then Part B in your Wazuh dashboard.

PART A - RECALL QUIZ (from memory, then verify)

Tier 1 - say the meaning AND why a SOC analyst cares

4728 - member added to the security group / SOC cares because: an attacker can add low privilege member in a security group to bypass privileges and do escalation

4720 - user account created / SOC cares because: it can be legit or an attacker is creating new account to create a backdoor

4738 - user account changed / SOC cares because: account details can be changed by the admin acc to his current employment status or an attacker is abusing the details to trick admin

4740 - user account locked / SOC cares because: high, because it cannot be intentional that a user is doing this - its a strong indication of brute force

4781 - Account name (SAM) changed / SOC cares because: it can be legit done by admin or changed a new user name to same like the one that admin knows to create social engineering

4726 - user account deleted / SOC cares because: if done by admin is good but if in odd hours attacker can delete the account after putting his work to remove evidences

4756 - member added universal group / SOC cares because: its also a high security group - if its done by attacker then the goal is persistence or lateral movement in other cross domains

Scoring: 7/7 cold = solid. Anything you blanked on -> re-read that README, then say it again out loud. That's the gap closing.

All 27 events in order - one-line meaning each (memorize these)

- [ ] 4720 - User account created
- [ ] 4722 - User account enabled
- [ ] 4723 - User attempted to change their own password
- [ ] 4724 - Admin reset a user's password
- [ ] 4725 - User account disabled
- [ ] 4726 - User account deleted
- [ ] 4727 - Security-enabled global group created
- [ ] 4728 - Member added to security-enabled global group
- [ ] 4729 - Member removed from security-enabled global group
- [ ] 4730 - Security-enabled global group deleted
- [ ] 4731 - Security-enabled local group created
- [ ] 4732 - Member added to security-enabled local group
- [ ] 4733 - Member removed from security-enabled local group
- [ ] 4734 - Security-enabled local group deleted
- [ ] 4737 - Security-enabled global group changed
- [ ] 4738 - User account changed

- [ ] 4740 - Account locked out
- [ ] 4741 - Computer account created
- [ ] 4742 - Computer account changed
- [ ] 4743 - Computer account deleted
- [ ] 4754 - Security-enabled universal group created
- [ ] 4755 - Security-enabled universal group changed
- [ ] 4756 - Member added to security-enabled universal group
- [ ] 4757 - Member removed from security-enabled universal group
- [ ] 4758 - Security-enabled universal group deleted
- [ ] 4767 - Account unlocked
- [ ] 4781 - Account name (SAM) changed

PART B - WAZUH MAPPING TABLE (fill in your dashboard)

How to check each event (why: this is exactly how you'd validate coverage on shift):
1. Dashboard -> Management -> Rules -> search the event ID (e.g. 4728). Note the rule ID and level.
2. Generate the event in your lab (use your portfolio's PowerShell methods).
3. Watch Threat Hunting - does an alert fire? At what level? Does the rule name match what you expected?
4. Verdict: covered (good as-is), needs tuning (fires but noisy/weak), or GAP (nothing fires).

Event	Meaning	Wazuh rule ID	Level	Verdict
4720	User account created	60109	8	needs tuning
4722	User account enabled	60109	8	covered
4723	Password change attempted	60110	8	covered
4724	Password reset by admin	60110	8	covered
4725	User account disabled	60111	8	covered
4726	User account deleted	60111	8	covered
4727	Security-enabled global group created	60140	5	covered
4728	Member added to security-enabled global group	60141	5	covered
4729	Member removed from security-enabled global group	60142	5	covered
4730	Security-enabled global group deleted	60202	5	covered
4731	Security-enabled local group created	60143	5	covered
4732	Member added to security-enabled local group			covered (fill rule ID from fired alert)
4733	Member removed from security-enabled local group	60145	5	covered
4734	Security-enabled local group deleted	60146	5	covered
4737	Security-enabled global group changed	60148	5	covered
4738	User account changed	60110	8	needs tuning
4740	Account locked out	60115	9	covered

4741

Computer account created

		60121	5	covered
4742	Computer account changed	60121	5	covered
4743	Computer account deleted	60121	5	covered
4754	Security-enabled universal group created	60149	5	covered
4755	Security-enabled universal group changed	60150	5	covered
4756	Member added to security-enabled universal group	60151	5	covered
4757	Member removed from security-enabled universal group	60152	5	covered
4758	Security-enabled universal group deleted	60153	5	covered
4767	Account unlocked	60133	5	covered
4781	Account name (SAM) changed	60110	8	covered

PHASE 1 DONE = all of this

- [ ] Part A: all 7 Tier-1 events recalled cold, all 27 meanings memorized in order
- [ ] Part B: all 27 rows filled - every event has a rule ID + level, or is marked GAP
- [ ] One-line verdict per Tier-1 event: covered / needs tuning / gap

When this sheet is full, Phase 1 is done and we build. Bring me the sheet (or just tell me the GAP rows) and we start Phase 3's custom rules.
